

# Culligan®

## Culligan® Preferred Series

To help you feel and perform at your best, various studies cite the importance of staying properly hydrated. Factors such as age, weight, usage of dehydrating beverages, activity levels, etc. significantly impact the need for water.

And now staying properly hydrated is easier than ever with the Culligan Preferred Series Filters available exclusively through your local Culligan dealer.

## The Culligan® Preferred Series Drinking Water System

### The Finest in Water Filtration

The Culligan Preferred Series Filters' proven precoat filtration technology improves the taste and odor of your drinking water and substantially reduces microscopic impurities and chemical elements. With precoat, water is exposed to a pleated semi-permeable surface coated with an exclusive Micro-Pure® filtering agent designed to remove up to 99.9% + of all particles sized 0.5 micron (1/50,000 inch) and larger. Compared to carbon block technologies of similar size the pleated surface design typically has 5 times as much surface area. The pleated surface increases water's exposure to the Micro-Pure® for longer cartridge life and improved efficiency.

- **Great tasting water** available at the your fingertips. Treated water provides better tasting coffee, tea and juices; more flavorful soups, sauces and pastas; richer baby formula; clearer ice cubes; crisper fruits and vegetables.
- **Specially designed metal walls** provide maximum resistance to water pressure surges, preventing cracks or splitting common to plastic filter housing.
- **Easy change system** provides a clean method to replace spent cartridges without any mess. Turn off water and just twist to remove and replace.
- **Less expensive per glass than bottled water** purchased at the grocery store. Costs only pennies per gallon. The system can provide about a year's supply of drinking water – determined by the size of your family, the amount of water you drink and dependent on incoming water quality.

# The Culligan® Preferred Series Drinking Water System

## Three separate choices for your unique drinking water needs

### Preferred Series 150 Drinking Water System

Value water filtration system certified for lead reduction. Provides up to 750 gallons of lead reduction, meeting NSF's requirement not to exceed 10ppb. Also reduces cysts and chlorine tastes and odors.

### Preferred Series 250 Drinking Water System

Increased capacity over the Preferred 150. Provides up to 1000 gallons of lead reduction, meeting NSF's requirement not to exceed 10ppb. Also reduces cysts and chlorine tastes and odors.

### Preferred Series 350 Drinking Water System

Maximum contaminant reduction system. Provides up to 300 gallons of Volatile Organic Chemicals reduction. Also reduces lead meeting NSF's requirement not to exceed 10ppb as well as reducing cysts and chlorine tastes and odors.
